Areas of Expertise

Developing rich Javascript applications on Rest APIs. Elegant, well-tested, and maintainable Javascript solutions to complex problems. A developer with a designer's attention to detail. Collaborating with design to create beautiful experiences. Building component and CSS libraries to facilitate modular development and application consistency.

Work Experience

DNSSimple (Front End Developer) *Aug '23 - Current*

Developed Vue.js components and marketing pages for DNSSimple.com. While I primarily worked with the public-facing site, as well as frequently working with the application team with Vue.js components and other front-end development needs.

Ruby On Rails, Vue.js, Stylus

Freelance (Full Stack Developer) *Aug '22 - Jun '23*

Freelance full-stack developer for various clients, both new and previous employers. Key technologies used thus far include React, PHP, Prisma, and Nodejs. Noteworthy projects include a dashboard for an existing application, distilling millions of rows into a high-level summary giving at a glance the health of the system, and calling out areas needing attention / manual intervention.

React, Preact, Stylus, PHP, Prisma, Vue.js, Nodejs, MySQL

Dept Agency (Full Stack Developer) *Sept '21 - Aug '22*

Fullstack React & Nodejs developer for several clients of Dept including a healthcare direct-to-patient startup, & an HVAC configuration application for industrial engineers. The project was funded by a grant from the Department of Energy.

Nodejs, React, Typescript, Express, PostgreSQL

Welocalize (FullStack Developer) *Sept '16 - Sept '21*

Built and supported several applications including Snap, a music transcription platform for Apple. An Electron application that communicated/controlled iTunes and later Apple Music API for translation/transcription of Apple's music library. Also built and maintained a project management/workflow tool to streamline Welocalize's translation project management process.

Nodejs, Vue.js, Postgres, Koa, Stylus, Electron

WikiHow (FullStack Developer) *Nov '14 - Jul '16*

Built an application coordinating article creation and curation between contractors and staff. The workflow application allowed over 300 contractors and WikiHow staff to collaborate effectively creating over 10,000 new articles on WikiHow. It was built leveraging Google Docs API, allowing document collaboration on Google Docs directly in the application.

PHP, MySQL, Javascript, Preact, JQuery

Measureful / Chirpify (FullStack Developer) *Mar '13 - Nov '14*

Developed and maintained the Measureful.com web application. An early-stage startup distilling client's analytics, and displaying them beautifully and concisely. My role included defining sprints and feature sets and rapidly prototyping and delivering them to a growing customer base. Also worked closely with the founder to design and build the look of the application's info-graphics, user interface, and other graphics. Measureful was acquired by Chirpify in 2014.

Ruby On Rails, Backbone, JQuery, PostgreSQL

New Relic (Senior Developer) *Jun '12 - Mar '13*

Work with the Rails application that allows customers of New Relic to monitor their applications and servers. Built new features such as Custom Dashboards, Key Transactions, and others. Also maintained and supported the existing application on a day-to-day basis.

Ruby On Rails, JQuery, Backbone, Stylus, PostgreSQL, Rest API

Collective Intellect / Oracle (Senior Developer) *Feb '11 - Jun '12*

Managed existing Ruby On Rails Applications as well as designed & built next-generation products. Applications run off of vast amounts of social media data enabling clients to “listen” for hashtags and phrases. Built a next-generation application as a Backbone.js application running off a JSON API I built to power the application. Collective Intellect was acquired by Oracle summer of 2012.

Ruby On Rails, JQuery, Backbone, Rest API, PostgreSQL

NewFinds (Founder / Developer) *May '05 - Feb '11*

Founded LLC working directly for clients and used as an outside resource for agencies. Partial client list includes; Yahoo, Jeep, Volkswagen, Ann Taylor, Sears, Reuters, Tivo, and McGraw Hill. Created a wide variety of sites and applications, from non-linear video experiences to FaceBook applications to Custom CMS solutions.

Flash, HTML, CSS, PHP, MySQL

Razorfish New York (Flash Developer) *Jun '06 - Sep '09*

Flash developer for various clients, including Mercedes AMG, and a white-labeled, API-driven retirement planner for multiple financial institutions. Highlights of this project included a custom graphing library.

Flash, HTML, CSS, Javascript

R/GA New York

(Senior Developer) *Feb '02 - Jun '06*

(Graphic Designer) *Sep '99 - Feb '02*

I designed various sites for IBM including; IBM.com, pervasive computing, Linux, and IBM e-server. I also developed & co-developed many Flash Nike sites including;

Nike.com, Nikerunning.com/usa, Nikebasketball.com/usa, nikelab.com, and nikepresto.com. We won numerous awards in this role including the “Flash Forward Film Festival Award” in 2003 for Nikebasketball.com. As a Flash developer for the Nokia N-series web, I built and maintained multilingual sites showcasing the multimedia capabilities of Nokia phones. Highlights included a music recommender and sites utilizing assets uploaded from users.

Flash, HTML, CSS, XML

Icon Nicholson New York

(Designer) Mar '97 - Sep '99

(Production Artist) Jan '96 - Mar '97

I worked as a production artist while finishing my BFA. I supported designers & art directors. I later worked as a designer. The partial client list includes; the Metropolitan Museum of Art, Reader's Digest, Pfizer, Thomas Register, and E-Trade.

Education

School of Visual Arts / Manhattan (BFA Graphic Design) *Jun '99*

Received a bachelor's degree after completing a four-year intensive graphic design program. Areas of concentration during my thesis projects included packaging and editorial design.

Skills

Javascript, Nodejs, React, Vue.js, Express, CSS, HTML5, Ruby On Rails, Rest API Development, Relational Databases
